

the art and science of smart patch testing™

NA77: Majantole

Patient Information

Your patch test result indicates that you have a contact allergy to majantole. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is majantole found?

Majantole is known for its fragrant lily of the valley scent and can be found in shampoos, soaps, and washing powders. It is mainly used within the cosmetic and fragrance industries.

How can you avoid contact with majantole?

Avoid products that list any of the following names in the ingredients:

- Majantol
- 2,2-Dimethyl-3-(3-methylphenyl)-propanol
- Benzenepropanol, $\beta,\beta,3$ -trimethyl-

What are some products that may contain majantole?

Liquids:

- Perfumes
- Shampoos
- Soaps

*For additional information about products that might contain **majantole**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
