## **MC256: Titanium (IV) oxide**

### **CAS#: 13463-67-7**

### **Patient Information**

Your patch test results indicate that you have a contact allergy to titanium (IV) oxide. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

#### **Where is titanium (IV) oxide found?**

Titanium (IV) oxide is used as pigment to color paints, sunscreens, cosmetics, skin care products, plastics, papers, inks, medicines, toothpastes, and foods such as milk. It is also a thickener found in tattoo pigment and styptic pencils. It has UV resistant properties and is therefore used to act as a UV absorber.

#### **How can you avoid contact with titanium (IV) oxide?**

Avoid products that list any of the following names in the ingredients:
