

the art and science of smart patch testing™

## PF151: Phenyl salicylate CAS#: 118-55-8

### Patient Information

Your patch test results indicate that you have a contact allergy to phenyl salicylate. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

#### Where is phenyl salicylate found?

Phenyl salicylate is used in the manufacture of lacquers, adhesives, waxes, and polishes.

#### How can you avoid contact with phenyl salicylate?

Avoid products that list any of the following names in the ingredients:

- 2-Phenoxyacetylphenol
- 4-10-00-00154 (Beilstein Handbook Reference)
- AI3-00195
- BRN 0393969
- CCRIS 4859
- EINECS 204-259-2
- Fenylester kyseliny salicylove
- Fenylester kyseliny salicylove [Czech]
- Musol
- NSC 33406
- Phenol salicylate
- Phenyl 2-hydroxybenzoate
- Phenyl salicylate
- Salol
- Salphenyl

#### What are some products that may contain phenyl salicylate?

##### Adhesives

##### Lacquers

##### Varnishes

\*For additional information about products that might contain **phenyl salicylate**, go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
