

## NA76: Jasminum Officinale Oil (jasminum grandiflorum)

CAS#: 8022-96-6

### Patient Information

Your patch test result indicates that you have a contact allergy to jasminum officinale oil. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching and fluid-filled blisters.

### Where is jasminum officinale oil found?

Jasminum officinale oil is an essence obtained from flowers and used in lotions, creams, and oils. It is used in products for dry, greasy, or sensitive skin, as well as creams for stretch marks and burns. You can also find it in perfumes and other aromatic products.

### How can you avoid contact with jasminum officinale oil?
