PG314 Triphenyl phosphate Patient Information

Your patch test results indicate that you have a contact allergy to triphenyl phosphate. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching and fluid-filled blisters.

Where is triphenyl phosphate found?

Triphenyl phosphate is found in the photography industry. It is also a fire retardant.

How can you avoid contact with triphenyl phosphate?

Avoid products that list any of the following names in the ingredients:

- 4-06-00-00720 (Beilstein Handbook Reference)
- AI3-04491
- BRN 1888236
- CCRIS 4888
- Celluflex TPP
- Disflamoll TP
- EINECS 204-112-2
- HSDB 2536
- NSC 57868
- Phenyl phosphate ((PhO)3PO)
- Phosflex TPP
- Phosphoric acid, triphenyl ester
- TP (VAN)
- TPP
- Trifenylfosfat
- Trifenylfosfat [Czech]
- Triphenoxyphosphine oxide
- Triphenyl phosphate
- Triphenylphosphate

What are some products that may contain triphenyl phosphate? Photography Products

For additional information about products that might contain **triphenyl phosphate** go to the Household Product Database online (<http://householdproducts.nlm.nih.gov>) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
